Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                    Sequence 24, Application US/08835770

Sequence 24, Application US/08835770

Patent NO. 5801124:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Edgardo Baracchini, Jr., C. Frank Bennett
APPLICANT: Edgardo Baracchini, Jr., C. Frank Bennett
APPLICANT: Edgardo Baracchini, Jr., C. Frank Bennett
TITLE OF INVENTION: Oligomucleotide Modulation of Multidrug
TITLE OF INVENTION: Resistance-Associated Protein
TITLE OF INVENTION:
STATE: Jo Lake Drive East, Suite 201
CITY: Cherry Hill
STATE: NJ
COUNTRY: USA

```
The present invention relates to a leptin receptor related protein (OB-RGRP) antisense oligonuclectide (ON; ADR27653), that hybridises CC specifically with and inhibits the expression of ADR27652. The ON promotes expression of Leptin receptors on the cell surface and may promotes expression of Leptin receptors on the cell surface and may contain phosphorothicate bonds; 2'-onethyl nucleotides and/or a contain phosphorothicate bonds; 2'-onethyl nucleotides and/or a contain phosphorothicate bends; 2'-one Also claimed are interfering RNA triethyleneglycol residue at the 3'-end. Also claimed are interfering RNA circussion of OB-RGRP. Also claimed are fusion proteins (FPS) and inhibit confing sequences comprising OB-RGRP or MY047 (thought to be a member of coding sequences comprising OB-RGRP or MY047 (thought to be a member of sa donor or acceptor of energy eq. luciferase or yellow fluorescent is a donor or acceptor of energy eq. luciferase or yellow fluorescent protein (YFP) for detecting compounds that modify the interaction between protein (YFP) for detecting compounds that modify the interaction between protein (YFP) for detecting compounds that modify the interaction between creat leptin-related disorders. Which can be used to prevent or the leptin receptor and OB-RGRP proteins, which can be used to prevent or creat leptin-related disorders. On seteoporosis (or other conditions involving reduced bone density); calcification; obseity, diabetes; anorexia, disorders of sexual maturity, can be interaction, ferminity mematopoliesis, angiogenesis, thrombus formation, resulted on fimmunity mematons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Untranslated region; coding sequence; chemotherapeutic drug treatment; antisense; modulation; multidrug resistance protein; drug; cancer; ss.

                                                                                                                                                                            oligonucleotides AAQ86826-50 are antisense oligonucleotides used to modulate the expression of the multidrug resistance protein (MRP) by modulate the expression of the multidrug resistance (WDR) gene or tis RNA message. This sequence is targeted to the 3' untranslated region (3'UTR) of the MNR gene. The oligonucleotides can be used to improve the efficacy of chemocherapeutic drug treatment of a disease such as cancer or to prevent multidrug resistance developing during drug treatment of a disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Phosphorothioate oligonucleotide; antisense; inhibition; cancer; multidrug resistance; multiresistant protein; MRP; chemotherapy; human; leukotriene; inflammatory condition; ss.

                                                                                     This is the nucleotide sequence of the phosphorothioate oligonucleotide used in the method of the invention, involving the used of antisense oligonucleotides are used for the antisense inhibit multidug resistance. The oligonucleotides are used for the antisense inhibition of multiresistant proteins (WRPS). These proteins are commonly found in some cancers which initially respond to chemotherapy, but overexpression of the protein leads to chemotherapy drug resistance. They are administered with the drugs to attempt to and as such, the oligonucleotides can be used to treat these conditions as well. The sequences are based on the human MRP and are used to treat conditions such as cancers, especially small-cell lung cancer, prevention of development of multidrug resistance during chemotherapy, and treatment of conditions characterised by leukotriene production, especially inflammatory conditions. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                 ö
            Anti:sense oligo:nucleotide(s) inhibiting multi:drug resistance protein expression - useful for increasing the efficacy of drugs that certain conditions have become resistant to e.g. small cell lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mouse; intermediate-conductance potassium channel; dermatological; antiinflammatory; kerstolytic; vulnerary; antipsoriatic; atopic eczema; contact dermatitis; vitiligo; skin; hyperkeratosis; actinic keratose; hypertrophic scar; keloids; lentigo; aged skin; ulcer; psoriasis; mIKl;

The invention relates to a novel use of intermediate-conductance potassium channel proteins. The proteins of the invention have dermatological, antiinflammatory, keratolytic, vulnerary, and antipsoriatic activity. The method is used especially in the field of damaged skin, e.g. contact dermatitis, atopic eczema, vitiligo, hyperkartosis, actinic keratosis, hypertrophic scars, keloids, lentigo, aged skin, ulcers and especially psoriasis. The sequence represents a PCR primer for the mouse potassium channel protein mIKI of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequences coding for pilin PilC proteins from Neisseria spp. have been isolated (see AAQ88239-Q88241). The pilC1 and pilC2 genes from N.gonorrhoese have 84% identity. Probes were designed based on regions of shared homology (see AAQ88242-88261) and these constant region probes were used in Southern hybridisations to identify other pilC genes in N.gonorrhoeae strain MS11 and N.meningitidis strain A493. Also, the same probes were used to screen a Pseudomonas aeruginosa strain and identified a pilC-like sequence. Gene sequences which hybridise with any of the constant region probes are claimed. RESULT 6

```
The invention relates to an oligomeric compound (I) capable of modulating univity expression, having 8-50 nucleotides and/or nucleotide analogues, where the compound comprises a subsequence of at least 8 nucleotides or nucleotide analogues, where the subsequence is located within a sequence chosen from one of 143 sequences given in the specification. (I) is chosen from one of 143 sequences given in the specification. (I) is useful for treating a mammal suffering from or susceptible from a disease caused by abnormal anajogenesis, by administering (I) containing one or more LNA units that are targeted to survivin. (I) is useful as a more LNA units that are targeted to survivin. (I) is useful as a cancer, in combination with chemotherapeutic agent such as busulfan cancer, in combination with chemotherapeutic agent such as busulfan etc. (I) or a conjugate (II) containing (I) is useful in the preparation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New locked nucleic acid containing oligomeric compound capable of modulating survivin expression, useful for treating cancer such as breast

By comparing the lengths of amplification products of RB exons from a suspected RB patient with those of RB wild-type DNA, patients can be diagnosed early which may avoid the need for radiotherapy. Any difference in length of exons between a suspected RB patient and those from wild-type RB1 indicates either a deletion or insertion mutation. Further sequencing of suspect exons can pinpoint the mutation. The method is directed to the diagnosis of and targeted genetic exception of the method is directed to the diagnosis of and targeted genetic exception.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying mutation(s) in RB1 exons by quantitative amplification - and by comparing length of amplification products and sequencing, for diagnosis and genetic screening of retinoblastoma.

New pharmaceutical composition comprising a BT-42 homologous protein or nucleic acid, and carriers, diluents or/and additives, useful for treating obesity, hyperlipidemia, osteoarthritis, cell masses.

Example 4; Page 39; 79pp; English

This sequence is a primer which was used in the amplification of the mouse KIAA0377 coding sequence. KIAA0377 is homologous to human BT42.

CC which are known to hydrolyze phosphate ester at low pH and are able to use a wide spectrum of substrates. The two BT42 isoforms of the cinvention, BT42-1 hypercholesterolaemia of 40 amino acids compared to invention, BT42-1 hypercholesterolaemia of 40 amino acids compared to mouse BT42-1 Also BT42-11 contains an additional exon of 40 amino acids. BT42 is regulated by facting and by genetically induced obesity. BT42, and the disclosed isoforms, may be used for the manufacture of an agent for detecting or/and verifying, for the treatment, alleviation and/or prevention of metabolic diseases or dysfunctions, including metabolic syndrome, obesity or/and diabetes, as well as related disorders such as extinct disease, cachexia, hypertension, coronary heart disease, cypndrome, obesity or/and diabetes, as well as related disorders such as extinct disorder, cachexia, hypertension, coronary heart disease, cypndrome, obesity, orland and metabolic syndrome for controlling the function of a gene or/and a cyland metabolic syndrome for controlling the function of a gene or/and a cyland modified by a BT42 homologous cyland substances capable of interacting with a BT42 homologous polypeptide, and for the production of a non-human cylands and cylanses the BT42. Sequence 18 BP; 3 A; 5 C; 7 G; 3 T; 0 U; 0 Other;

Identifying mutation(s) in RB1 exons by quantitative amplification - and by comparing length of amplification products and sequencing, for diagnosis and genetic screening of retinoblastoma.

Claim 12; Page 14; 48pp; English.

AAT11532 is a PCR amplification primer used for the amplification of exon 1 of the human retinoblastoma RB1 gene. This primer and many other primers (see AAT11420-T11473) are used to amplify RB1 exons for use in a method of diagnosing mutations in the RB1 gene. By comparing the lengths of amplification products of RB exons from a suspected RB patient with

```
AAT12839-T12899 (excluding AAT12878) are PCR primers used to amplify various regions of the RB-1 genome, including exons 1-27, the promoter region and a control sequence unrelated to RB-1 from chromosome 15. The primers are used in an example of a method for testing a disease-associated mutation in a gene, the gene may not necessarily be a tumour suppressor gene like the retinoblastoms gene another example is the partial transmembrane conductance regulator (CFTR) gene which may be analysed using the same method. The primers are used in various groupings to produce a hierarchical assay useful to test a group of patients angeleted to have a genetic mutation. The method allows the optimum (or near optimum) diagnostic algorithm by considering the cost and the sensitivity and specificity of each test
                                                                                                                                                                                                                                             ö
those of RB wild-type DNA, patients can be diagnosed early which may avoid the need for radiotherapy. Any difference in length of exons between a suspected RB patient and those from wild-type RB1 indicates either a deletion or insertion mutation. Further sequencing of suspect exons can pinpoint the mutation. The method is directed to the diagnosis of and targeted genetic screening for retinoblastoma in family members of a retinoblastoma patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Testing for a disease-associated mutation in a gene - using a hierarchy of tests selected to optimise performance while minimising cost.

The invention relates analysing multiple targets in polymucleotide, convolves providing a set or sets of multiple primers with target nucleic acids in separate reactions of primer extension or amplification, where acids in separate reactions of primer extension or amplification, where the reactions produce nucleic acid products in that each nucleic acid tragments comprise at least one restriction sites with cognate products of the separate reactions on the restriction sites with cognate products of the separate reactions on the restriction sites with cognate reactions together, where randomly joining nucleic acid fragments from the separated reactions are created, amplifying the joined products, and the separated reactions are reacted, amplifying the joined products, and detecting the amplified products. Also included are an oligonucleotide detecting target nucleic acid sequence (complementary portion and 5' non-complementary portion and 5' non-complementary portion and 5' non-complementary portion comprises a restriction enzyme site, where the complementary portion or complementary portion or restriction marker in the process of detecting target nucleic acid sequence, where the detection signal generated from target nucleic acid sequence, where the detection product is comprising a set or sets of multiple targets in a polymocleotide condition on restriction of multiple targets in a polymocleotide condition on restriction of multiple targets in a polymocleotide and for genotyping mutations, preferably single creatriction enzymes, DNA ligase, DNA polymerase, dNATP, buffers for all enzymes, and dNTPs). The method is useful for analysing differential gene conclete acids from any source. The method any speciation of multiple targets quantitatively. An experiment was performed, using the method of the invention, where SNPs were detected in 70 human genomic DNA in the fragets quantitatively. The present sequence is a primer used in the engance of targets quantitatively. The present sequence is a primer used in the en

Where the compound specifically hybridises with and inhibits the expression of the BH3 interacting domain death agonist. The Compound of the invention is useful for inhibiting the expression of the BH3 interacting domain death agonist in cells or tissues. The compound is also useful for treating an aimal having a disease or condition associated with the BH3 interacting domain death agonist, e.g. hammalpootietic disorder, hyperproliferative disorder, a developmental disorder, immunological disorder, or a disease or condition of the liver e.g., hepatitis, or a condition associated with apoptosis. The compound is useful for disgnostics, therapeutics, prophylaxis and as research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        reagents and kits. This polymoracy is propriate an antisense oligonucleotide inhibitor of the DNA from mouse BH3 interacting domain oligonucleotide inhibitor of the DNA from mouse BH3 interacting domain oligonucleotide inhibitor of the DNA from mouse BH3 interacting domain oligonucleotide 20 nucleotides in length, which is flanked on both sides by five-nucleotide 'wings'. The wings are composed of 2'-methoxyethyl (2'-MOB) nucleotides. The internucleoside (backbone) linkages are phosphorothicate (P=S) throughout the oligonucleotide. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Hepatotrophic; immunomodulatory; cytostatic; antiinflammatory; hepatitis; haemostatic; BH3 interacting domain death agonist; liver disease; haematopoietic disorder; developmental disorder; immunological disorder; hyperproliferative disorder; apoptosis; mouse; chimeric; 2'-methoxyethyl; 2'-MOE; phosphorothioate backbone; murine; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a method for identifying a compound that is capable of modulating feeding behaviour, fat deposition, metabolic rate, or the ratio of lean muscle mass too body fat in a subject. The method comprises performing an assay to measure a metabolism-associated phenotype that has been determined for a genetically modified non-human animal that comprises a genetic modification within an allele of its Cbl locus, and determining the effect of the compound on the phenotype. The genetic modification reduces or prevents expression of a functional endogenous Cbl in the animal. The c-Cbl protein is a multi-adaptor protein that is involved in ligand-induced down regulation of receptor tyrosine kinases. The method of the invention is useful in the treatment of feeding disorders or disorders of glucose uptake and metabolism, such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Identifying compounds capable of modulating feeding behavior, fat deposition, metabolic rate, or the ratio of lean muscle mass to body fat by detecting a proto-oncogene Cbl in disorders such as diabetes, obesity and hypolipidemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    as diabetes, obesity and hyperlipidaemia. The present sequence is the antisense strand for a human c-Cbl siRNA. The siRNA is useful in modulating a metabolism-associated phenotype in a cell, tissue or animal
                                                                                                                                                                                                                                                                                                                                                   Antidiabetic, Anorectic, Bating-Disorder, feeding behaviour, fat deposition, metabolic rate, lean muscle mass; body fat, Cbl; multi-adaptor protein, feeding disorder, glucose uptake disorder; metabolism disorder; diabetes; obesity; hyperlipidaemia; human; c-Cbl; siRNA; short interfering RNA; ds; RNA interference; gene silencing.

The invention relates to high copy number expression constructs for high comprise a nucleic acid sequence encoding a set of trans-acting comprise a nucleic acid sequence encoding a set of trans-acting comprise a nucleic acid encoding a yeast selectable marker transcription factors, a nucleic acid encoding a yeast selectable marker convoluting an inefficiently or efficiently selected phenotype, a nucleic acid encoding a yeast or bacterial origin of replication (ori), and a cuique restriction site downstream of a promocer containing a cis-acting cunique restriction site downstream of a promocer containing a cis-acting caracterist in the interest that the expression construct. In a specific embodiment of the invention, the expression construct contain DNA cacting control element within the promoter which drives expression of acting control element within the promoter which drives expression of the invention actors and a dala, when constructs of the invention express to fall and dal80, and a UASgal cis are expressed in stoichiometrically-balanced amounts, which is particularly important for a galactose-inducible system, as Gal4, when constructs of the invention express the transcription factors at levels constructs of the invention express the transcription factor, and can become toxic to the cell. The expression of the gene of interest. The expression constructs provide expression of the gene of interest. The expression constructs provide constructs of the expression of a gene of interest. The expression constructs provide constructs of the synession of a gene of interest (which can encode an robust, high level expression of a gene of interest (which can encode an construct of expression constructs of the expression of a gene of interest (which can encode an encode constructs yeast galactose-inducible synession construct of extince in a galactose-inducible expression construct of expression construct of extince the expression of expression construct of extince the expression of expression constructs of extince the

The antisense oligonucleotides can be used for inhibiting the expression of mtPEPCK in human cells or tissues in vitro and can also be used for treating an animal, particularly a human suspected of having or being prone to a condition of disease associated with expression of mtPEPCK. They can also be used in disease associated with expression of mtPEPCK. They can also be used in disease associated with expression of mtPEPCK. They can also be used in disease associated with expression of mtPEPCK.
                                                                                                                                                                                                                                                                                  Human, mitochondrial phosphoenolpyruvate carboxykinase; PEPCK-M, PCK2;

Gaston Tremitary For The DNA fragment(s) resulting from plants from INRA (Versailles). The DNA fragment(s) resulting from plants from INRA (Versailles). The DNA fragment or order the Porder the PCR were directly sequenced flanking the insertion. T-DNA to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the derived sequences were removed. Information site are available at graphical display of the insertion site are available at graphical display of the insertion site are available at graphical display of the insertion site are available at program 'Genoplante' (http://www.genoplante.com and program 'Genoplante' (http://www.genoplante.com and Location/Qualifiers
                              was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 was blunt location with T4 DNA polymerase and T4 polymerase and T4 inches with the mass. Adaptor oligomucleotides were polymucleotide kinase. Adaptor oligomucleotides were ligated to the blunt ends in high molar excess. The ligated bnA was purified and size-selected for a 9.5 to adaptored bnA was purified and size-selected for a 9.5 to electrophoresis. Vector DNA was prepared from a derivative of pwn92 (gi|4732114|gp|AR129072.1), a copy-number of pwn92 (gi|4732114|gp|AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated inthe adaptors complementary to the insert adaptors and with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to chemically-competent E. coli XIJO-Gold (Stratagene) cells and selected for ampicillin resistance."

musculus CJ/DL/OU NUMBLE DNA RESOURCE LICHEL LICENTIFICATION CHARLES AND RESOURCE ASSOURCE S/documents/dnares/). The DNA (http://www.jax.org/resources/documents/dnares/). The DNA (http://www.jax.org/resources/documents/dnares/). The DNA (http://www.jax.org/resources/documents/dnares/). The DNA orgonization of the organization of the searced bna was blunt ends in high molar excess. The ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to adaptored DNA was preparative agarose gel 10.5 kb range using preparative agarose gel crophoresis. Vector DNA was prepared from a derivative electrophoresis. Vector DNA was prepared from a derivative of pWN42 (gil473214) [gb/Hz129072.1], a copy-number of pWn42 (gil473214) [gb/Hz129072.1], a copy-number of pWn42 (gil473214) [gb/Hz129072.1], a copy-number of pwn41 (gil473214) [gb/Hz129072.1], a copy-num

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g
                                                                                                                               Laboratory Mouse DNR Resources (documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwMp42 (gi|4732114|gb|AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared adaptored mouse DNA was annealed to

(http://www.jax.org/resources (http://www.jax.org/resources documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligomucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWn2 (gil 4772114[gb]AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli Xil0-Gold (Stratagene) cells and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 27, Application US/09986632
Patent No. US20020119944A1
GENERAL INFORMATION:
APPLICANT: AGUERA, Michelle
TITLE OF INVENTION: Modulation of Ulip/CRMP activity for the prevention or TITLE OF INVENTION: treatment of myelin disorders
FILE REPERENCE: P069740301/Bas
CURRENT APPLICATION NUMBER: US/09/986,632
CURRENT PILING DATE: 2001-11-09
PRIOR FILING DATE: 2000-11-09

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymerase of polymerase and T6 polymerase preparative agarche gel of 5 to adaptoresis. Vector DNA was prepared from a derivative of pwD42 (gi|4732114|gb|AP129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored weeter DNA, and transformed into chemically-competent E. coli XLIO-Gold (Stratagene) cells and selected for ampicillin resistance."

was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 BNA polymerase and T4 polymerase and T6 polymerase and T7 polymerase polymerase polymerase polymerase polymerase polymerase with preparative agarose gel polymerase vector DNA was prepared from a derivative of pwD42 (gi|4732114|gb|AR12972.1), a copy-number of pwD42 (gi|4732114|gb|AR12972.1), a copy-number with adaptors complementary to the insert adaptors and with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored wector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   20 bp mRNA linear EST 06-JUL-2004 DKFZp434E105_r1 434 (synonym: htes3) Homo sapiens cDNA clone DKFZp434E105, mRNA sequence.

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinae. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwM92 (gilfa732114 gpl AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coll X110-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Estatement to 17)

was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of puncible derivative of plasmid R1. The vector was ligated inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli X110-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18 bp mRNA linear EST 06-JUL-2004
